Decreased sunlight can cause drops in your

body's production of serotonin, a brain chemical that helps to det

ermine mood. Lack of light can also alter the brain's balance of

melatonin, a chemical produced during the hours of darkness that helps

to govern sleep patterns and mood.

We a

re affected a great deal by being more tired.

And it's very much due to our physiological processes in the body. The sleep

hormone we have called melatonin is secreted in the body when it's

dark.
